Jarden Zinc Products and A. Zahner Company to Exhibit at AIA Chicago

GREENEVILLE, TN and KANSAS CITY, MO – May 20, 2014 – Jarden Zinc Products and A. Zahner Company to showcase new architectural product offerings and new technology at the American Institute of Architects (AIA) Convention in Chicago, IL in June 2014.

Jarden has expanded its breadth of architectural products beyond coil and sheet. For the first time American made architectural zinc fabricated products will be available to architects and builders. The products include the first in industry reversible zinc Composite Panels as well as Flush-Reveal Wall Panels, the FlatLock Tile System, the Corrugated Sine Wave Panel and the Single Lock Standing Seam System which can be used on both wall and roofing applications. The new products by Jarden will be on display in various finishes at this year's AIA convention.

These new products offer several benefits in form and function. The Composite panels add stability and support to large façade pieces with its two layers of zinc sandwiching a fire-rated or non-fire-rated core.

The Flush Reveal panels are a clip-based system, which allows for more thermal expansion making it an ideal system for zinc. The system features custom reveal sizes that range between ½" and 6".

FlatLock Tiles can be ordered to size in diamond, elongated diamond and rectangular shapes. These tiles provide a myriad of unique design options.

Jarden's Architectural Zinc products can be further enhanced by three of Zahner's stunning finishes, created to mimic textures and hues found in nature. The Hunter™ finish closely resembles the limestone in the area surrounding the Chattanooga Art Museum, which graces this beautiful Zahner® finish. Zahner created the Roano™ finish for the Taubman Museum façade in Roanoke, Virginia to simulate the rich colors of the ever-changing mountain leaves in the nearby Blue Ridge Mountains. Also notable is the original Baroque™ finish with its chocolate brown hues and small yellow flecks.

In addition to aesthetically pleasing product offerings will be Zahner's new ShopFloor™ web-based software. ShopFloor™ is an intuitive user interface that allows designers to design complex facades and other building components quickly and easily. Designers can also see the price change as they manipulate the 3D model. This allows users to directly control and improve the value engineering of their design. The final output is pre-engineered and fabricated on Zahner's shop floor. The simplified design interface means that costs are greatly reduced when compared to traditional design, engineering and fabrication.

The AIA Convention will be held at the McCormick Place in Chicago, IL on June 26-28, 2014. This is the second event by Jarden and Zahner after forming an exclusive partnership in 2013 to provide a line of custom patinated zinc. Jarden and Zahner will be located in Booth 1005.

About Jarden Zinc Products

Jarden Zinc Products is a leading global supplier of solid zinc coil used in the production of architectural and building products, rain goods, coinage, automotive fuses, and cathodic protection products. Located in Greeneville, Tennessee since 1970, we have been manufacturing zinc products in the U.S. since 1885. Jarden Zinc Products is a subsidiary of Jarden Corporation.
